To Whom It May Concern

Regarding: Letter of Reference for FlowCentric

Namib Mills embarked on a project in 2016 with the drilling of a borehole to supply our factory with water specifically during the draught affecting Namibia. There was however a problem with the fluoride and iron levels in the borehole water and as result, a water purification system was needed.

FlowCentric, as well as other local and international companies, were requested to quote for the supply of a water treatment system (RO was the chosen process).

Due to the professional service and very competitive price for quality equipment, FlowCentric was selected as the successful company to assist with our project.

FlowCentric worked with AquaPlan to produce an RO skid for our specific requirements. The installation of the RO system took place in September 2016 with the installation and commissioning being done as part of the contract. It is now a full year later and we are very happy with the quality of the installed products as well as the 24/7 assistance we receive from FlowCentric – they are always willing and able to assist with all queries.

This is a rare find amongst contractors in Namibia. As a result, Namib Mills would like to recommend FlowCentric for any water treatment projects to be done.

Please feel free to contact me if you require any additional information.

Kind Regards,

Elfrieda Roos
