**Water Evaporator Units**

---

To whom it may concern,

This letter serves to confirm that FlowCentric Mining Technologies manufactured, delivered and commissioned 3 x 75kW mechanical evaporators and 3 x Pontoon Pumps. The entire system is driven by a 650kVA diesel generator via MCC. They are also responsible for weekly maintenance of the evaporators and hourly based maintenance for the diesel generator. The system is designed to evaporate about 2.5 ML/day, and operating efficiently as designed.

The evaporation technology is far more affordable compared to water treatment options, and also less environmental red-tapes. FlowCentric delivered on time on the committed project timelines, with regular updates on progress during manufacturing stage. I recommend them for a similar project elsewhere and also avail this site for a visit in case of tender referrals.

Kind regards,

**DUNCAN MJADU**
