PRODUCT RECOMMENDATION - EVAPORATION SYSTEM FOR TREATED WATER REDUCTION

The 22kW Rhino Evaporator system was installed and commissioned at the Client location and included the ancillary components to provide a mobile system for the enhanced evaporation (and this reduction) of treated wastewater.

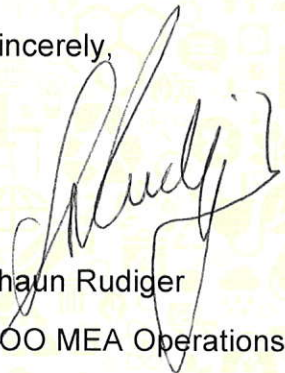

The system effectively supports the existing process by reducing the volume (enhancing the evaporation) of treated water in the aggregation ponds. This contributes to final staging levels being lowered and thus ensuring production continuity,

Our process team regard the system as a "value-add" process component, highlighting the evaporation system performance and quality of equipment.

The OEM vendor is supportive, albeit it a remote support, and have assisted with all the required technical requirements.

The team and equipment are recommended for similar projects.

Sincerely,

Shaun Rudiger
COO MEA Operations
