RE: EVAPORATION SYTEM INSTALLED AT PILANESBERG PLATINUM MINES

Dear Sirs,

This letter serves as confirmation that Flowcentric Mining Technology completed a Turnkey Installation at our mine during August 2021 under the following scope of work:

- 1 x 75kW Rhino Evaporator (Supply & Install)
- 1 x 75kW Booster pump and all pipework (Supply & Install)
- MCC with PLC / Data capability on flowrates and operating hours (Supply & Install)
- All downstream electrical cables (Supply & Install)
- Test and commissioning of system

The system is performing as per specification for the past year, the flowrate is 144m³ per hour of which we evaporate around 60%, the dam levels are monitored in this regard. We do not experience any malfunctioning of the nozzles which are usually a challenge.

Trust you find the abovementioned to be in order.

Yours in Mining

**Casper H. Badenhorst
Chief Operating Officer**
