

Reference Letter / Turnkey Solution

Project: Moz Environmental Pemba Mozambique

To whom it may concern

Flowcentric Mining Technology supplied and commissioned a tailor-made mechanical evaporation (forced evaporation) solution for us as to evaporate reject water in Pemba Mozambique. The liquid is pumped from a holding pond to the evaporator unit and then sprayed back over the pond. The pond has drift netting all around as to contain the spray.

OEM Equipment Supplied in highly corrosive environment:

Evaporator 7,5 kW (15m<sup>3</sup> p/h throughput)

Handrails

Booster Pump 15kW

Pipework

Mcc – Automated with soft starters

Downstream cables and all connections.

The system is working well and much more sufficient and cost effective than water treatment.

Moz-Environmental highly recommends Flowcentric Technology Systems for water evaporation and forced evaporation, it is a system that works.
